
Link to article from Ari Data Table

Posted by mnunan - 2014/03/01 09:00

Hi There

Could you please tell me if it is possible to link to an article from a record within a table?

What I have is a column called 'names' and I want to make the name a hyperlink which when clicked on opens the article, the link would look like this:

www.mysite.com/jobs/all-jobs/id

Where 'id' is also a column in the table and contains a value such as '15' so the link would need to get the value in the corresponding id field of the same record.

Could you help please?

Thanks

=====

Hello,

Set "Columns settings -> ID" parameter to names value and "Column settings -> Format" parameter to the following value:

{ \$value }

Regards,
ARI Soft

Hi There,

I am trying this solution but it does not work for me.
I have a column named SID and i want a link like <http://mywebsite.nl/518> (where 518 is the value)

{ \$value }

The result shows 518">518 where it should be 518

Any suggestions ? Could somebody help?

Best regards,

Elroy

Hello,

Do you use "ARI Data Tables" or "ARI Smart Content" extension? Do you use the latest version?

Regards,
ARI Soft

I use ARI Smart Content version 2.1.2
Thanks in advance.

Upgrade it to the latest version (2.1.4). If it doesn't help, could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

Thank you,
After upgrading to the newer version the problem is solved.
