Show URL when exporting

Posted by obisgrove - 2014/04/04 09:13

_____

Hi there,

Firstly can I say we love you module, it's great! We have URL in our datatable which we've converted to a more user friendly "link" (Link), when exporting to CSV or excel it comes up as the word link. Is there any way of getting the URL behind it?

Or Alternatively fix the width and height for a URL column so it doesn't take over the page if it's long? (just showing a small amount of the data - www.website..., that type of thing?)

Thanks so much for any help!

Cheers,

Ollie

Hello,

Sorry, but the extension doesn't support this ability. It exports the same values which are shown in a table.

Regards,
ARI Soft

Okay, how about setting a limit to the amount of data shown in a column but being able to export the full amount?
