
CSS Classes not displaying multiple tables

Posted by fritzthecat26 - 2014/04/16 08:33

Hi,

I am using CSS classes to define tables and give different tables a different features (colour, background etc.)

Unfortunately, when two table are displayed simultaneously (either in two modules or in two articles) the css classes do not seem to work, or only pick up half the formatting.

Have a look at this page: www.idru.com.au

The two tables are formatted with the same css styles (neither is 100% right)

Please help

Tony

Hello,

Could you describe in more details what exactly are shown wrong on the page?

Regards,
ARI Soft

The tables you can see on the front (home) page <http://www.idru.com.au/en/> are designated with the table css class "redtable" (Note the table called Æpcoming Premiar Division Clashes). This same table (same module of type ari datatable) appears on this page <http://www.idru.com.au/en/senior-rugby>
As you can see the css styling (background colours, borders etc) are completely different although the module is the identical one.

This problem with custom CSS rules for "bluetable". It contains the following CSS rule:

```
table.dataTable.redtable thead tr th {  
    font-weight: bold;  
    font-size: 80%;  
    border-top: 1px solid black;  
    border-bottom: 2px solid black;  
    background: none repeat scroll 0% 0% black;  
    color: white;  
    padding: 5px;  
}
```

It overrides default redtable background.

Hi,

Thanks for your response.

However, the problem seems to be more systemic.

Please look at the following two site pages:

<http://www.idru.com.au/en/junior-rugby/upcoming-fixtures>

and

<http://www.idru.com.au/en/junior-rugby/latest-results-juniors>

The first page displays correctly. The second page has the identical css-styling for all the tables, exactly the same as the tables on the first page.

I do not understand that the tables on the first page use the css styles, whereas the tables on the second page seem to ignore them randomly.

Thanks for your help

Tony

Check "Choose table type -> ARI Data Table -> Columns settings" parameters section in module settings for the tables. It seems nonexistent columns are specified in "Column index" parameter.

Thanks for your reply.

I tried to delete any excess columns. No difference.

Also please look at the following page:

<http://www.idru.com.au/en/junior-rugby/upcoming-fixtures>

Although it has the same settings (i.e. odd.even) and css styles, the bottom tables (Byes) is not picking up the styling for the odd.even rows, like all the tables above. Same css styles (tables are copies of each other - just with different sql query)

Do you need to look at the backend?

Tony

Could you provide a temporary access to your J! backend by email so we can investigate the problem in more details?

Regards,
ARI Soft
