How to get started with SQL queries

Posted by dominicusbjorkstam - 2014/04/17 16:45

_____

Hi,

Have a form that collects data to a joomla table like the following

An event with multiple categories: boat, car, house, etc.
Each category has several participants and I want to show in a table the participants under each category:

CAR
xx
xx
xx
xx

HOUSE
xx
xx
xx
x

BOAT
x
x
x
x

How can I accomplish this with Ari tables and a suitable query?
I'm totally new to SQL so I would need help where to read up on the subject or how to efficiently get the data filtered to display in an Joomla Article

Help appreciated

Dominicus

_____

Hello,

Send SQL dump of table(s) where data is stored by email so we can provide an SQL query.

Regards,
ARI Soft
