
Resize columns width

Posted by Rico - 2014/06/04 09:08

How can I change the columns width?
Thanks in advance for helping

Hello,

Use "Columns settings -> Width" parameter. For example if you want to change width of the first column, set "Columns settings -> ID" parameter to 0 value and "Columns settings -> Width" to 150 for example.

I am still having a problem with column widths. On page <http://cfigs.org/index.php/local-resources/cemetery-project/tombstone-database>, I need more room for the Additional column and I have changed the width of the Birth and Death columns from 10 to 5 and the width on the page has not changed. These two columns still take up more space than needed. Do I need to make a change to another setting to fix this?

Thanks

Hello,

Remove value for "Columns settings -> Width" parameter for the last column (with index = 5).
