
ari table information

Posted by kmbarm77 - 2014/06/10 12:01

Hello everyone, I'm new to this forum.

I'm going to buy the module ari table, but I wanted to know if:

1) you can do a query on a SLQ Server

2) In the options of the module ari table, you can enter IP, user name, pwd to query the table?

On the website I can not find the necessary documentation that explains how it works and the real potential 'of the form. is great that the module converts the information in the chart and this is what I seek.

Could you give me more information?

=====

Hello,

1. It is possible to show data from a MS SQL server via ODBC. PHP ODBC extension should be installed on your web server and ODBC source should be configured.

2. It is necessary to enter connection parameters in module settings (like DB name, user name, pwd and host).

Regards,

ARI Soft

Thank you for having responded to me.

So you're saying that if on my web server I have installed the ODBC, I just configure paratri in the form (username, pwd etc ...)

I take advantage of your willingness to ask more questions.

On the form there is a refresh time ... for example I want every 2 hours, the module queries the db and updates the graph ... This is expected?

Hello

In my configuration I have to connect to a MS SQL db, I created a connection between my joomla site and the db and get that weak ago I opened firewall port 1433. When I go to see if everything is ok I get the error message: ARI Data Tables:

Could not connect to external databases. I ask. if the default module has a port other than 1433.

The problem is that I can not connect to the database ... You have solutions?

Hello,
my friend is not in the office today so I took another reservation number (***).
Can you tell me how come I get the error message (ARI Data Tables: Could not connect to external databases.)

Re:ari table information

Posted by kmbarm77 - 2014/06/11 10:55

I'll explain briefly the situation.
Are within an intranet. I installed on a linux server package joomla. Adesso I want to query a SQL Server database where the database is located.
The machine where it is installed joomla is 192.168.xx while the DB is 192.168.xx I opened the firewall port 1433 and telnet from the machine to the joomla db responds ok.

This is the scenario but the module replies that it can not connect to the db. Do you have solutions?

Re:ari table information

Posted by admin - 2014/06/11 10:58

Port can be defined in host parameter. It will look like 192.168.xx.xx:1433

If you want to connect to MS SQL directly ("DB Type" parameter is set to MS SQL), check that MS SQL PHP extension is installed on your web server.

Hello,
I got the data as numbers I need. The data numbers are correct. I can not, however, 'to show in graphical form. Can you help me?

Hello, and sorry to bother you ... you still want to do the compliments for the module, very interesting and well done. I want to ask you one thing, I need to see the number (which you can see the tooltip) down below the two bars. The form is displayed on the wall with a projector so you can not switch the mouse to see the numbers. I need to see both the data under the two bars. Can you help me?

see attach.

Hello,

Google charts doesn't support this ability.

Regards,
ARI Soft

Re:ari table information

Posted by kmbarm77 - 2014/06/13 05:42

Hello, I do not think that it is difficult for you to change the code and make sure that I can see the number under the bar ... (as an image). Unfortunately I really need. because the graph is not clear how many tickets book in stock.

The number module provides the means tooltip ... What I wonder is that is also seen in the two bars mySAP - Other. I do not think it is very difficult for you Please it is very important.

Can you help me?

Re:ari table information

"ARI GChart" uses Google charts API. Code which renders charts is located on Google server, we can't change it.

Posted by kmbarm77 - 2014/06/13 06:41

I run my form on an internal intranet. I do not go on the internet. So do I connect to google I just seems to me a real number under the two blue bars. It 's very difficult to visualize the data in numerical form?

Hello, I have a small problem with the internet explorer browser. If you increase the level of security in the browser can not display the graph, but only see the numbers as you can see in the image attached.

How can I solve this problem? <http://www.ari-soft.com/images/fbfiles/images/Immagine7.png>

Re:ari table information

Posted by admin - 2014/06/16 09:03

Hello,

Try to add "google.com" to "Trusted sites".

Regards,
ARI Soft

Re:ari table information

Posted by kmbarm77 - 2014/06/16 09:15

I tried ... but it does not work ... see attached .. <http://www.ari-soft.com/images/fbfiles/images/Imagine8.png>

The problem occurs because with "High" security level in IE, scripting is disabled. Click by "Custom level..." button "Security" tab in IE and set "Scripting -> Active scripting" parameter to "Enable":
