Make text as link without adding http://

Posted by ffwmusic - 2014/06/16 15:51

_____

Hello,

I have a table that contains voip links for our internal phone system. I would like to make the text in a column clickable. But I do not want it to add the http:// to it. Here is an example:

```
CUST#      NAME            MOBIL          LinkMobile
A&L01      TED HUNTER      913-915-0278    TT:913-915-0278.?Dial
A&M01       AL RAHMANKHAH   407-367-8053    TT:407-367-8053.?Dial
A&M01       AMY STEVENSON   407-394-4008    TT:407-394-4008.?Dial
```

as you can see the actual address I want to link to is in the column LinkMobile. All I need to do is make it clickable.

Is this possible?

_____

Hello,

If you want to convert links to hyperlinks, set "Columns settings -> ID" parameter to LinkMobile value and "Columns settings -> Format" parameter to the following value:

Link

Regards,
ARI Soft
