
How to query for article image and content?

Posted by clampi - 2014/06/29 06:22

How do I query to show:

- a) An articles image? (full image or intro image)
- b) An articles content

The table columns should be: ID, Title, Image, Content

The id and title are shown with the query below. But how to add image and content to the same query?

```
SELECT
id, title
FROM
#__content
WHERE
catid = 48
ORDER BY
created DESC
```

Hello,

a. It is not possible because images are stored in JSON format in database. It requires modification of the extension to extract this data.

b. Use the following SQL query:

```
SELECT
id,
title,
introtext
FROM
#__content
WHERE
catid = 48
ORDER BY
created DESC
```

Regards,
ARI Soft
