
Question about search box

Posted by Dyniak - 2014/07/07 08:57

Hi guys, I would like to buy an ARI Data Table module but i have to know something about it before i will.
Is there any option to create search box somewhere in other article in joomla? I would like to make a possibility to search something from the table from my main site. Not only when table is displayed.

Regards!

Hello,

Do you want to show a search form and when a user click by "Search" button load a page with a table with filtered results?

Regards,
ARI Soft

The extension supports ability to use request variables in "WHERE" clause of SQL query (if you want to show data from a database) so it is possible to create a search HTML form outside the module and send data from it to the page with the module.
