
Consulting the bd joomla in localhost

Posted by coheta - 2014/07/28 22:01

Good night.

I have purchase the product ARI data tables, I would like to display data from a especific table calle "atestados_alcoholemia"located on localhost.

I have very basic computer skills.

Can you help me configure "sql query" to connect the bd and to make the query?

Sorry for my english.

Hello,

If the table is located in Joomla! database, set "Choose source type" parameter in module settings to "SQL", "SQL -> Choose DB type" to "- Joomla! database -" and enter the following query in "SQL -> SQL query" textarea:

```
SELECT
*
FROM
atestados_alcoholemia
```

Regards,
ARI Soft
