
Responsive Table

Posted by Webangel - 2014/08/07 09:32

Hi,
I use data tables at one of my webpages!
It runs on Joomla 3.3.1

On smarthphones the page is displayed perfectly, except the tables!
E.g. <http://lesbian-world.de/lesben-locations/locations-deutschland/lesben-locations-muenchen.html>

Is it possible the switch to responsive tables?
Or do I've to create a CSS solution?

Anybody out there can help me?

Hello,

Set "Auto width" parameter to "No" and add the following code to "CSS Styles" parameter:

```
TABLE.dataTable {table-layout:fixed;}
```

Regards,
ARI Soft

Hello and thanks for your response!

It works only partially!

the remaining columns (after display width on my iPhone 5S) are above each other in a extra column

See at <http://lesbian-world.de/literatur/allgemeine-literatur-frauen.html>

The problem occurs because the fixed width is defined for the first two columns (see "Columns settings -> Width" parameter) and these widths takes all available space on mobile device with not high screen resolution. You can leave "Columns settings -> Width" parameter empty.

Thank you very for you response and tip for the column settings.
But now it looks pretty unsightly! High columns with unreadable content.

Is there any possibility to do it like
<http://css-tricks.com/examples/ResponsiveTables/responsive.php>

Does Ari Soft offers another tool for a approbate solution?

Currently the extension doesn't show tables in this way.

I am having the same problem with a responsive layout.

Your CSS solution worked perfect to display the table!

Would it be possible to change the text size through CSS as the browser window changes to a specific size?

If so what would be the steps.

Thanks for your time and knowledge.

Hello,

Send your order number by email please and a link to a page where we can see the table.

Regards,
ARI Soft
