Automatic parsing of col sorting type went wrong

Posted by dinant@dtwm.nl - 2014/08/14 18:29
_____

I have a CSV file with 35 columns. The first one contains text and the others columns contain numbers with the dot as decimal character. When showing 15 columns of the csv file with ARI Table Sorter it parses 8 colomns as text instead of digit. The debug output is:
column:0 parser:text
column:1 parser:digit
column:2 parser:digit
column:3 parser:text
column:4 parser:text
column:5 parser:digit
column:6 parser:digit
column:7 parser:text
column:8 parser:text
column:9 parser:text
column:10 parser:text
column:11 parser:text
column:12 parser:text
column:13 parser:digit
column:14 parser:digit
column:15 parser:digit
column:16 parser:digit
column:17 parser:digit
column:18 parser:digit

I know I can change the Sorting type to digit manually but that should not be needed.

Regards,
Dinant

Hello,

Could you send your CSV file by email?

Regards,
ARI Soft

_____

Download and upgrade the module. After this clean browser's cache. It should help.

I did an uninstall of the old version and then an install of the new version. Now the modules I have added are deleted also.
Do you have to install without uninstalling the old version?

Now with version 1.14.3 the automatic parsing of column sorting type is ok.

Thanks for your quick help.

Regards,
Dinant

_____

Upgrade doesn't require to uninstall previous version. Just install a new version via standard Joomla! installation page and the installed version will be upgraded.
