
How do I ?

Posted by johnny@ejs.dk - 2014/08/21 21:13

Hi

I now have Ari Data Tables connected to my MS SQL and showing the DATA I want to show.

I also have two links in my table, one links to the system behind my data (BMC Remedy) and i can open Remedy and work with an Incident from my Data Table, works perfect.

My second link opens a PDF file having same name.PDF as the particular incident that I select, but this is static and requires PDF's to be created all the time (manually).

How do I parse the selected record to an article page showing the data in a structured way?

I am using the FORMAT option to link to my PDF's ie. <http://website/data/BunchOfPDF/INC000007788.pdf> (Skema

Do You have any extension that can show the same data in an article, setup like a form? <http://www.ari-soft.com/images/fbfiles/images/003.PNG>

Can you give a hint to do something like that?

Sincerely

Johnny Ejs

Hello,

Do you want to select only one record from table(s) and show it in a form view?

Regards,

ARI Soft

Yes exactly

To day i render the PDF on picture and wish to do this on the fly.

I know too little about how Joomla articles interact with Vars and parameters that can be parse'd in the url.

Maybe all my info would be too much to Parse? Perhaps only the INC000xxx Number should be parsed and the article / form page lookup via ODBC / MSSQL ?

Sincerely Johnny Ejs <http://www.ari-soft.com/images/fbfiles/images/Skema.PNG>

Sorry, but the extension can't show data in this format.
