
Passing non-latin variables

Posted by alexispi - 2014/08/27 14:59

Hi

After succesfully using ARI Data Tables to pass numeric vars (using {\$value}) I can't pass non-latin (eg. Greek) chars. Is there a way to url encode the {\$value} and is it going to solve the problem?

Hello,

Do you want to apply urlencode PHP function for {\$columns:myCode} parameter?

Upgrade the module to the latest version and use the following code in "Format" parameter:

{\$value}
