Problems to create a bar chart via SQL

Posted by atexo - 2014/09/11 18:45

_____

Hi,

i started to use ARI table and I'm impressed by its functionality. However, i've some issues to create a chart (Data visualizer/Bar) by the a SQL statement.
I stated SELECT id, Anzahl FROM IQCK_ARI_Verteilung_Chart but nothing is shown. I used the debug mode and there's no error message. If I use the table function everything is shown. So what did i wrong?

I checked also SELECT * FROM IQCK_ARI_Verteilung_Chart but the same issue. The table contains just 2 columns.

Thanx Atexo

Hello,

Unfortunately we don't know what settings you use for the module and structure of IQCK_ARI_Verteilung_Chart table. Could you provide a link to a page where you use the module and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

As always...Great Service! Thanx alot.

For others: it was (again as always ;) :-) a jquery issue)

Atexo
