Scale of y-Axis with float number instead of int

Posted by atexo - 2014/09/13 08:33

_____

Hi guys,

i managed to suck all data via sql from the joomla database. Everything is working fine so far.

However, i have a problem with the scale number of the y axis (please see image). all values of my sql query are more or less float numebers. the ARI Tables tool automatically creates (what is great) integer numbers on the y-axis. However,the very last number on the axis is equal to the maxiumum value of the value column. As you can see, it looks not really good. Furthermore there is no space between the the value bar with the maximum value and the top border of the chart (please see image).

Am I doing something wrong? Or is there a way to fix this?
Thanx atexo http://www.ari-soft.com/images/fbfiles/images/Bild1-ecd108603ae88916f078d5c311de8feb.png

_____

Hello,

Send screenshot(s) of module settings page (with all parameters) by email please.

Regards,
ARI Soft
