
ARI Data Tables > Make multiple DB calls

Posted by jptarry - 2014/09/19 15:14

instead of loading everything from the database at once (i have ALOT of data)

is there a way to make multiple calls to the database when the user paginates?

ex:

when page loads make a call that will only get the first 50 items

then every time the pagination is clicked get the next 50

thanks

Hello,

See "Server side pagination" parameter in module settings.

Regards,
ARI Soft
