
Column CSS goes when Column sort selected

Posted by WhatsMyTime - 2014/10/07 10:10

Hello

Now that I have worked out the table column sort function my CSS goes for the column that is being sorted and reverts to standard CSS.

Thought this was because that I have an external CSS function set up but copy and pasting back it into the page still has the same results.

Link to test page.

Any help would be great.

Many Thanks
WMT

Hello,

Could you send screenshots where we can see what's wrong and what do you want to achieve?

Regards,
ARI Soft

Add the following CSS rules:

```
TABLE.dataTable TBODY TR.odd TD.sorting_1 {background-color:#ffffe0;}
TABLE.dataTable TBODY TR.even TD.sorting_1 {background-color:#ccffff;}
```

:woohoo:

Works a treat. Have some karma.
