
Fatal error: Class 'AriArrayHelper' not found

Posted by enricocerica - 2014/10/10 13:25

Hi,

I'm trying to use the CSV file format but I got the message Fatal error: Class 'AriArrayHelper' not found in \modules\mod_aridatatables\tmpl\genhtmltable.php.

Any idea ?

Thanks

Hello,

Check that you use the latest version of the extension (v. 1.14.5).

Ok forget it, the problem occurs in a portion of code I added, but it seems that with CSV files the class AriArrayHelper is not created, so I have to check that. Sorry

Use the following PHP code to import "AriArrayHelper" class:

```
AriKernel::import('Utils.ArrayHelper');
```
