
Sorting trouble with international characters

Posted by clampi - 2014/10/11 19:16

The Ari Data table sort the Norwegian letters in the following order: "Ã...Ã†Ã~Ã¶Ã¡Ã_". The correct order should be: "Ã†Ã¡Ã_Ã~Ã¶Ã...". I believe this is a part of the module, and not the database collation (utf8_general_ci). I tried to change the database collation, but nothing happens. Any idea?

Hello,

Send screenshot(s) of module settings page by email please.

Regards,
ARI Soft

It did not work. However, the web page is under construction and currently off-line. I'll come back when it's online so you can see. However, in general, the Danish and Norwegian alfabeth sorts Ã¡Ã_Ã¶, while the Swedish and Finish sorts Ã¶Ã¡Ã_. I guess the problem is in those character sets.

Hi,

That's the problem for me too.

I use 30 different languages in one column of the table and they are all in a different alphabetical order. It puts the letters of the Latin alphabet in good order, but places the accented and unique characters at the end of the line.

How do I set the table column so that the international characters are in good order?

What is the solution?

Regards,

=====

Hello,

What table widget do you use?

Hi
I use the ARI Data Table setting.
You see in the picture.

...
In other images, you can see that the accented and unique characters are at the end of the column.
I'm looking for a solution to this.

Hi,
Do you have an idea?
I sent my settings.
Collator :: sort solution should be, but how do I paste the code and where?

Should I send you access to my website in a private message?
