

Formatting Numbers from DB

Posted by jptarry - 2014/10/20 19:34

im formatting the numbers that im getting from the database and its working for the data tables (500000 > 500,000) however its not working for the charts

is there a way to format the numbers in the tooltip for charts?

Hello,

Could you provide a link to a page with the chart and an image where we can see what do you want to achieve?

Regards,
ARI Soft

unfortunately its on an internal server but this is what the data looks like once its returned from the database:

Name	Bud.	Act.	Diff.
A	952	958	-6
B	150,618	156,424	-5,806
C	15,298	16,813	-1,515
D	185,290	185,709	-419

it works perfectly in the data tables but its not working in the GCharts
its mistaking 150,618 for 150.618 (with a decimal)

so my question is... is it possible to format numbers on the GCharts so that it shows commas and is it possible to also add in a prefix like '\$'

If you use "ARI GChart" widget. See "Choose table type -> ARI GChart -> Formatters" parameters section. For example set "Choose table type -> ARI GChart -> Formatters -> Column index" parameter to 1, "Choose table type -> ARI GChart -> Formatters -> Type" parameter to "Number" and populate "Choose table type -> ARI GChart -> Formatters -> Additional parameters" parameter with the following content:

prefix=\$
decimalSymbol=,
