
Set columns not filterable

Posted by adeshjohnson1 - 2014/10/29 02:58

Hello. How can we set some columns not filterable? We are using MySQL - Server Side Pagination. It seems like the search is global and is filtering all columns (using like a for loop through all the columns); we want to filter only through certain columns not all.

Thank you,
John.

Does the Search functionality filter through a column set as hidden?

Hello,

It is not possible to define what columns will be searchable for "ARI Data Table" widget, but it is possible for Datatable application from "ARI Smart Content" extension.

Regards,
ARI Soft
