
Create master/detail using ARI DataTable

Posted by ferdigerungan - 2014/11/06 08:53

Dear sir,

I would like to create the screen (or article) that has 2 part which are header (master table) and body (detail table) just as like the attached file using ARI DataTable... is it possible to do?

These 2 tables link to each other by the LOGIN field...

I already can do each but using different article but i dont know how to do if need to make just like the attached file example

Please help...

Thanks,

Ferdi http://www.ari-soft.com/images/fbfiles/images/Master_Detail_1.jpg

I think the WHERE CLAUSE in the secondary table hold the records of the detail table... while if i delete the WHERE CLAUSE its works well but not showing the relationship between the record in first and secondary table...

where do i need to make correction... pls help

thks

The module instance for secondary table uses request variable in "WHERE" clause to select necessary data. In your case you can send value of "LOGIN" field.

in the main table setting format i put this:

`index.php?option=com_content&view=article&id=6&LoginID={$value}`

do i correct?

Could you provide link to page with main table and a temporary access to your J! backend by email so we can investigate the problem?

Could you send screenshot(s) of modules settings pages by email and specify what values you use for "Columns settings -> Format" parameter?

Dear Support,

I just wanna make sure whether this same product also can support joomla 2.x?

Please confirm...

Thanks
