
How do I do this ?

Posted by johnny@ejs.dk - 2014/12/09 08:17

I have a simple list that contains Year, WeekNo, Name, Mail

The list has records from 2014 + 2015 + 2016

I wish to show the list with the current Year/Week present and the whole list browseable - like my picture shows.

I have the Year and WeekNo in PHP code prior to my {aridatatables moduleId="201"} statement.

So if i fix the table to allways show i.e. 10 entries I can calculate wich 'PAGE' to show - Is that possible?

Sincerely

Johnny Ejs <http://www.ari-soft.com/images/fbfiles/images/Udklip-7b674086070dd1b2e3ad575c288cab6c.PNG>

Hello,

Do you want to sort data in the table by year and weekno by default? Do you show data from a database?

Regards,
ARI Soft

I do sort the data by Year / Week but I want the current week to appear on the page when the list is selected - and to make it possible to browse forw / back in weeks / time.

I want to feed the DataTable all my data but start displaying i.e. "Showing 61 to 70 of xxx entries"

Alternately I can make my query select Current Week + i.e. 5 and then select the next 10-15 weeks and the table will work - just not possible to browse beyond theese 10-15 records.

Sincerely
Johnny Ejs

Sorry, but the extension doesn't support ability to open a specific page on page load.
