## Convert simple Html tables for Ari Data

Posted by emanuelechiari - 2015/01/04 12:06

---

When I purchased Ari Data for Joomla 2.5 you guys send me a file call System - Ari Data Tables to make my simple html based tables work with your extension....

Now I migrate the site from joomla 2.5 to Joomla 3.4 and of course I downloaded the last version of Ari Data Tables 1.14.7 but when I call from the menu a page with your extension, I've got just a blank page.....

I guess I need again that file that you send me by email working for the new version 1.14.7 Ari Data Tables  
Thanks a lot :-)
