Dear Support,

I have a table which continuously updated from every milliseconds and i would like to display that data (table from mysql) lively through ARI DATA TABLE... is it possible?

I did used server pagination and seems the data already updated but the screen display only want to refresh when I clicked the next/previous button... how to do it automatically (like auto refresh) every time the data updated in the mysql table?

Please help... thks

Hello,

The extension doesn't support this ability. It requires custom modification of the extension.

Regards,  
ARI Soft
