Need Help Getting Static HTML Table Working

Posted by fvapaches@gmail.com - 2015/01/16 18:16

_____

Before on Joomla 2.5 i just wrapped my static html table inside an article in the following it would use your Data Table
{arijdatatable bPaginate="true"}
{/arijdatatable}

Now when i do that on Joomla 3.x it doesn't do anything. I have my other database tables setup working properly, but i can't get this static html table to work. Please let me know how to get this to work. I just purchased the Data Tables module for $15, I'm not sure if i need the SmartContent package for $35 to get this functionality for the static HTML tables or not, please advise, thanks!

_____

I'm all set and have both the SQL data table and the static HTML data table working properly now since you emailed me the "System - ARI Data Tables" plugin.

For other users with the same issue have him email you that new plugin, uninstall the old "Content - ARI Data Tables" plugin. Install and enable the "System - ARI Data Tables" plugin. Then you're all set if using the code below.

{aridatatables moduleId="MODULEID" type="inline"}
... html table goes here ...
{/aridatatables}

Hi I am in the same boat here, Joomla 3 and a recent purchase of the Data Tables module and a static html table that I would be very happy if I could parse inline, so I kindly ask for the same system plugin if possible.
