Colour to Specific cells in CSV

Posted by Villasante - 2015/01/20 10:48

_____

Hi there,
Hope everything is good...
I have a doubt...

Is it possible to colour specific cells in a table displaying a CSV file?

Thanks very much

Manu

_____

Hello,

Do you want to change color for cells in specific positions (for example the second column in the third row, the first column in the second row and etc.) or for cells which contain specific value?

Regards,
ARI Soft

_____

Hi...
Thanks for the quick reply...

I have a table with different values of customer accumulated money.
I would like to colour in red colour, the cells that have been paid to customer and leave normal the cells which haven't been paid.

I have the colour version of the table in xls, but as i have to convert to CSV, all the colours are gone....
Is that al all possible??
Thanks
Manu

_____

Only possible solution is using HTML code in CSV files. For example wrap a value with the following code:

value goest here

or

value goest here

and add the following CSS rule to "CSS Styles" parameter in module settings:

DIV.status-paid {color:red;}

Thanks....
So it would have to be done cell by cell....?

I guess if i am looking to a file with a few hundreds of values, that would be pretty chaotic...
Would it be any easier way?? or any other tool to do it?

Thanks a lot....

Is it possible to detect somehow what color should be for a cell? For example by cell value of value from another cell?

Regards,
ARI Soft

Re:Colour to Specific cells in CSV
_____

There would be only two colors. One red, meaning that the amount has been paid, and the normal (or any) color of the cell, stating that we are holding that amount.
This would be a simpler verrsion of the table above. http://www.ari-soft.com/images/fbfiles/images/Screen_Shot_2015_01_20_at_22-adf018fd0d83babe249e7c8032f0cd16.png

_____

Hi,

no.. there would be no way to know know the value.
A customer can request payment at any time or amount.

_____

CSV format doesn't support ability to mark cells with color. It is a simple format which is used to store only data. You can use the solution which we described before or add a new column to CSV file which will be used to set status of payments and set cell color based on value of this column.
