Column Format Rounds Up

Posted by kfrancart - 2015/02/10 18:59

_____

Everything is working except instead of showing 6.5 it is rounding to 7. I probably am using the wrong code {$value}. I have verified in the database that it shows 6.5. Would be great to have a list of potentials for the Format column in Column Settings. Thanks!

Hello,

What value you use for "Columns settings -> Format" parameter?

Regards,
ARI Soft

_____

In the Module mod_aridatatables section entitled Column Settings I am using "{$value}", without the quotes. It was the default. I couldn't find any documentation on what else I could use. I appreciate your quick response!

_____

The extension is not rounding numbers. Could you provide a link to a page with the table where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft
