
AriTable - Using a hidden column for standard sort

Posted by HeinzP - 2015/02/14 07:48

Dear all

I'm looking for a solution to use the first column of a csv file to sort an ari table - this works really fine as long as I'm showing this column. See test page.

But was I'm looking for is the hide this column and to keep this sort function anyway.

Is there a way to do this or is it not possible to use the sort of a hidden column?

Thanks for any ideas to solve my challenge?

Heinz

Hello,

Use "Choose source type -> CSV -> Sort by" and "Choose source type -> CSV -> Sort direction" parameters to define default sorting. Enter a column name in "Choose source type -> CSV -> Sort by" parameter.

Regards,
ARI Soft

Works as expected. Thank you very much for your prompt reply and great support!

Best regards,
Heinz
