## AriDatatables not working Joomla version3.4

Posted by agarger - 2015/02/25 20:32

---

None of my Aridatatable modules are working since I updated to joomla 3.4

I am using aridata table 1.14.9 this is the most current version

Hello,

Could you describe what exactly doesn't work? Backend part or frontend part? Is it possible to see the problem anywhere?

Regards,  
ARI Soft

## Re:AriDatatables not working Joomla version3.4

Posted by agarger - 2015/02/26 12:34

---

The backend and the front end, any page that has an aridatable module shows up blank in a browser and I can't add any new columns when creating a new module in the backend.

---

Upgrade the extension to v. 1.14.10. It contains the fix for backend part.

Frontend part is working fine on our test server. Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Hi there - I'm having the same issue with the Datatables plugin that comes with ARI Smart Content that I just bought tonight and installed. When you fixed Datatables, did you update the DataTables plugin in the ARI Smart Content? Because the version that comes with that is dated 1.1.1 for the plugin and isn't letting me add columns in the query configuration screen (I get a few " Uncaught TypeError: undefined is not a function" errors).

---

Hello,

"ARI Smart Content" v. 2.1.13 is compatible with Joomla! 3.4. If it doesn't for you, it can be a conflict with a 3rd party

---

extension. Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,  
ARI Soft

---

Hello,

I have also a problem since I have updated dot Joomla 3.4.  
Ari Data Tables Version is latest on 1.14.10

The fault message looks like this:  
Fatal error: Cannot redeclare utf8\_strcasecmp() (previously declared in  
/home/content/63/8519063/html/brsillian/libraries/vendor/joomla/string/src/phputf8/strcasecmp.php:18) in  
/home/content/63/8519063/html/brsillian/libraries/phputf8/strcasecmp.php on line 25

Thanks for your help.

---

I found the problem:

When I put in the field "file encoding" ISO-8859-1 it is not working any more.  
I use a csv-file, for a quick solution I remove the entry and change the csv-file itself to utf-8 encoding.

---

To zanzibar: try now please.

To nefachris: we can't reproduce this problem with the latest version of the module. Could you send a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

---

Hello,

even I do have problems after updating Joomla from 3.3.6 to 3.4.0

The problems does not occurs on all pages.

E.g. on <http://lesbian-world.de/lesben-partys-events/lesben-partys-events-oesterreich/lesben-partys-events-oesterreich.html>

Fatal error: Cannot redeclare utf8\_strcasecmp() (previously declared in /homepages/21/d151122881/htdocs/LesbianWorld/libraries/vendor/joomla/string/src/phputf8/strcasecmp.php:18) in /homepages/21/d151122881/htdocs/LesbianWorld/libraries/phputf8/strcasecmp.php on line 25

Here it works the way I used to know:

<http://lesbian-world.de/literatur/allgemeine-literatur-frauen.html>

Thank you very much in advanced.

Webangel

PS: I don't want to lose the opportunity to write the umlauts in the common way - not using HTML code

---

... thanks for you reply!

Upgrading means to buy the latest version?

---

## Re:AriDatatables not working Joomla version3.4

Posted by admin - 2015/03/03 10:59

---

It doesn't require to buy this again. The latest version of the extension is always available in Member Area.

I have an issue as well (version 1.14.10). In frontend I get the following error Messages:

Notice: Undefined index: sorters in /kunden/214043\_96450/rp-hosting/14989/43871/backup/modules/mod\_aridatatables/includes/kernel/DataTables/Models/class.DataTablesWidgetTablesorterModel.php on line 161

Notice: Undefined index: sorters in /kunden/214043\_96450/rp-hosting/14989/43871/backup/modules/mod\_aridatatables/includes/kernel/DataTables/Models/class.DataTablesWidgetTablesorterModel.php on line 186

see <http://www.fbv1979.de/info/schnittliste>

In backend I set ARI Table Sorter as table type. I cannot set the sorting order in backend. The input for column index, sorting order and so on get lost while saving the module. Also removing all column settings for sorting does not work.

Michael

---

Hello,

Upgrade the module to v. 1.14.11. It should help.

Regards,  
ARI Soft

---

---

Hello,

We don't have a lite version of "ARI Data Tables" extension.

Regards,  
ARI Soft
