
Responsive Tables / Diagrams and Layout-Problems

Posted by custrin - 2015/03/05 06:29

Hello,

1) I use AriDatatables to display data from csv files as table and/or diagram. Now my complete website is responsive, except the Datatables-Parts. Ist it possible to make them responsive ?

2) I have some little layout problems with the diagrams. Please look on this page, you see the display errors on the left and right side of the diagrams. How to fix this ?

Hello,

1. Currently "ARI Data Table" widget from "ARI Data Tables" is not responsive, but ARI Smart Content - Data Table application from "ARI Smart Content" supports responsive mode.

2. If you want to use responsive charts then you can use "ARI GChart" instead of "ARI Data Visualizer". Set "ARI GChart - > Width" parameter to 100% or 70% for example.

Regards,
ARI Soft
