Possible to add a setting for loading jQuery UI?

Posted by zanzibar - 2015/03/17 11:23

_____

Hi there,

Is it possible as a future feature you could add a separate setting for jQuery and jQuery UI? I have jQuery being loaded globally by Joomla but it isn't loading jQuery UI. The only way to have it load for DataTables though is by enabling the entire thing which causes it to load multiple jQuery libraries as well as jQuery UI. I've noticed a few other extensions separate these and found it useful there since I don't need the jQuery UI code loaded on every page.

Thanks!

Hello,

If you want to use jQuery instance which is loaded by Joomla!, set "Config -> Plugins settings -> Load jQuery Method" parameter to "Local copy".

"ARI Smart Content - Data Table" doesn't load jQuery UI javascript files. It uses only jQuery UI CSS files. It is possible to select a theme in module settings.

Regards,
ARI Soft
