
CSV table - first column cannot be resorted

Posted by HeinzP - 2015/03/23 21:42

I have a table on my website. The sort works at the moment of load. But the resort isn't working.

What should I change to have the end user sort available too?

Thanks
Heinz

Hello,

Upgrade "ARI Data Tables" module and clean browser's cache.

Hi there

Thanks for your feedback. Do I have to buy the product again - or will that be included in my purchase of the Jun 9th, 2014 (No 205298097083). Where do I have to download the upgrade?

Best regards,
Heinz

The latest version of the extension is always available in "Member Area" on our site.

thank you very much - works as expected!
Great super!!!!

Heinz

sorry to be back again:

Sort of the first column works as expected - but I cannot update the module
- if I add, delete or update within the column settings - it doesn't save changes
- editing the module again shows the old values
- sort direction doesn't work

Thanks for additional support.

Regards
Heinz

please check sort of column 1 (Datum:) using browser Chrome - doesn't work! Firefox runs well!

It works fine in Google Chrome and Firefox for us. Try to clean browser's cache in Google Chrome.
