
mysql field parameters from url

Posted by usam110 - 2015/03/30 13:44

Hi,

I am a newbie and want to know how can we use the parameters taken from URL or alias of joomla articles:

for e.g

My urls are:

<http://example.com/blue/>

<http://example.com/green/>

<http://example.com/red/>

I am using external database (not joomla) and i have a column which contain fields 'colors'.

I want to give a statement to mysql query :

```
SELECT *  
FROM `table 1`  
WHERE Color = 'alias of the current article'
```

i have tried giving the php code which i use in articles with sources to get the alias or title of joomla article which is:

```
{source}}{/source}
```

I want to use the same output as my field. Kindly help
