
Pie Chart Configuration

Posted by mixailangelos - 2015/04/03 15:49

I'm trying to configure from ARI GChart the Pie Chart widget. Do you have any documentation about that? I'm actually trying to create a pie chart sorted by one column of the CSV file ("yes" and "no" cell content)for the last month only(date column) and sorted by the sport(sport column).(one pie with option to check results per sport). Another question is , if the Data table widget and the Pie Chart will be in the same module instance or in a separate because both of them are getting data from the same CSV file.

You can see the table in www.GunBet.gr

Hello,

It should different module instances.

Could you send your CSV file by email and an image where we can see what chart do you want to show?

Regards,
ARI Soft
