
Data table format options

Posted by halumme - 2015/04/04 18:20

Hi,

I try to create a table where there would be an icon and a hyperlink in the rightmost column. Not all rows have this link so the image should not be visible without a link.

Is there a way to insert a conditional format - i.e. if the link is in database, the image would show - otherwise not.

I believe that if I add another field with the image file path, this would work but it creates lots of redundant fields.

Thanks for help,

Harri

Hello,

Currently the extension doesn't support conditional expressions.
