## Create tables from excel or csv file

Posted by remon - 2015/04/08 12:26

---

Hi there,

I just purchased the AriTables software and having some problems creating/importing data from a excel/csv file. My goal is to make something like this page. With data from an excel file shown on the frontend of my website. This is the example page: <http://emdrtherapeuten.nl/friesland/>

hope to hear from you,

best regards,

remon

Hello,

Could you specify what problem do you have?

In brief, if you to show data from a CSV file, set "Choose source type" parameter to "CSV" value and enter a path to CSV file in "CSV -> Path to CSV file" parameter. For example if you want to show data from /data/report.csv file, populate the parameter with the following value:

data/report.csv

Hi,

the problem I have is that the csv file from excel shows all the data in one column, not in seperate ones. And in between it places the ; seperation mark. How can I correspond the columns in excel with columns in Ari Data Tables?

grtz

Set "CSV -> Auto-detect mode" parameter to "Yes" or specify a separator (; symbol) in "CSV -> Delimiter" parameter.

Hi,

If you are looking to create a data layout similar to this page I maybe able to help

<https://www.stockpinger.com/>
