Importing CSV
Posted by graphiclux - 2015/04/17 12:40

_____

I am looking to import a CSV and believe I have the path correct for the csv..

my site is http://gl.dyndns-ip.com/griffco

I have the folder within the griffco folder called data and the file is in it called cad1.csv

I have tried this: data/cad1.csv and griffco/data/cad1.csv and nothing shows up in the article I have the module loaded into.

Also once the data gets loaded from the csv, is there a way to edit it through the module or do you have to update the csv (not sure if it was a 1 time upload and then manage through the site or if you just manage the csv the whole time).

_____

Hello,

The correct value for "CSV -> Path to CSV file" is:

data/cad1.csv

If you see nothing, it can be a problem with an extension which is used to load the module into an article. If you use "Content - ARI Data Tables" plugin, check that the module is enabled and correct plugin code is used. For example if you want to load "ARI Data Tables" module instance with ID = 14, use the following plugin code:

{aridatatables moduleId="14"}{/aridatatables}

_____

I have the plugin(s) enabled and I have the correct code you sent me in place as well with the correct ID for my module (117 in my case).

I still just get nothing in the page. If the plugin was not working I am guessing that the code to insert the module in the article would show up and not nothing.

Please let me know.

_____

It can be a problem with 3rd party extension. We can investigate the problem in more details if you provide a temporary access to your J! backend by email.

_____

Thanks for fixing my issue. I have one more question. I am trying to have links that will be clickable within my csv to files I have uploaded. If you look at my current page you will see it is just plain text for the file path. Is there a way to do this or do you have any recommendations?

_____

For example if you want to convert links in "PDF" column to HTML hyperlinks, set "Columns settings -> ID" parameter to ID and populate "Columns settings -> Format" parameter with the following value:

Link

Hmm.. I looked through your instructions but I do not see where I would add any of this within the module itself.

Can you give me an example or just set up 1 in my admin area (you have credentials still).

Thanks
