
Not Displaying on Mobile Devices correctly

Posted by WhatsMyTime - 2015/04/20 13:36

Hello

Up until Saturday we were using Ari Datatables to display our race results, worked ok on PC's and Mobile devices (iphone 5, 5s and Mini ipads ok) Now the page doesn't display very well on the mobile devices. It Displays part of the results but the page seems to be off set.

Link to results.

How can we sort this out ?

Have not test on any Android devices.

Hello,

Add the following CSS rule to "CSS Styles" parameter in module settings to use scrolling in the table:

```
.dataTables_wrapper{overflow:auto}
```

Regards,
ARI Soft
