
How to setup secure connection for external data

Posted by spitfire - 2015/04/23 02:12

Can you please tell me how I can use this with ssl ?
I have my joomla site on one host and another database is remote.
Need to use a secure connection to get the data.

Thanks

Hello,

Specify a port which is used for secure connection in "SQL -> External database -> Host" parameter. Usually it is 3307 and the following value can be used:

localhost:3307

Regards,
ARI Soft
