
Minor Format Issue

Posted by kefford - 2015/05/01 02:29

Hi,

I am using ARI DataTables v1.14.8 and am noticing a strange issue. I have a web page with a bar chart and the X-axis label is showing "..." on the rightmost value label. See the attached screen grab.

The ARI Data Table module instance controlling this page display is set with a Label Length = 0, which according to the extension documentation should mean axis labels will never be truncated. Any ideas?

Please note, I upgraded to 1.14.12 and it shows the same truncating of the rightmost label.

Hello,

Could you send a link to a page where the problem occurs?

Regards,
ARI Soft

Use this link,

<https://sim-x.net/test/index.php/simulators-approval-level.html>

This is on my test site, but it is a clone of the live site. I set the permissions on the page to PUBLIC access so you do not need to login.

Notice the truncating at the right-most label of the X-axis on the bar chart.

It is not possible to open the page. The following error occurs:

"You are not authorised to view this resource."

Sorry, try it now! I missed setting correct permissions on the article itself. Now it should be accessible.

Populate "ARI GChart -> Bar chart -> Chart area height" parameter with 80% value and "ARI GChart -> Bar chart -> Chart area width" parameter with 60% value.

Sorry, I failed to reply back and thank you for your assistance. Your suggestion worked perfectly, and I ended up using these same settings on several other pages to avoid this problem. Thanks very much.
