
No Euro sign in browser

Posted by Luiiard - 2015/05/12 16:04

I have a table with prices in Euro's. In PHPmyadmin it looks good, but when I show this field in my browser (IE) it doesn;t give the Euro sig but a square with a question mark. Can I change this?

Hello,

Do you show data from Joomla! database or an external database? If you show it from an external database, what DB type is used and what charset is used in this DB?

Regards,
ARI Soft

I am using an external database (PhpMyAdmin) the char code is: utf8_general_ci.

Hope this is enough information?

Best regards,
Gerrit Spilt

If you use a MySQL database, set "Choose source type -> SQL -> External database -> Charset name" parameter to utf8 value.
