
Server Side Pagination not working

Posted by BrianCoulter - 2015/05/13 14:18

Everything works great until I enable this feature.

Here is the query:

```
SELECT warpfact_joom856.jxn_users.name AS Tech, RoutineEntry.Date,Sites.Name AS Site,Routines.Name AS Routine FROM Routines INNER JOIN RoutineEntry ON RoutineEntry.Routines_ID = Routines.ID INNER JOIN Sites ON RoutineEntry.Sites_ID = Sites.ID INNER JOIN warpfact_joom856.jxn_users ON warpfact_joom856.jxn_users.id = RoutineEntry.Tech_ID WHERE Sites.Market_ID = {$REQUEST:market} ORDER BY RoutineEntry.Date DESC
```

With server side pagination enabled this, "LIMIT 0,1" is added to the end of the query and I get no results.

Hello,

Could you send a link to a page where the problem occurs? You can send it by email.

Regards,
ARI Soft

Several months later and my db table is getting so big that it loads very slow. I created a view to simplify my query and with server side pagination on I still get no data in my table.

The new query:

```
SELECT Tech, Date, Site, Routine
FROM view_routines WHERE Market_ID = {$REQUEST:market}
```

The new query:

```
SELECT Tech, Date, Site, Routine
FROM view_routines WHERE Market_ID = {$REQUEST:market}
```

Never mind, I hacked the Aridatatable code to get it to accept session variables in the module sql query.

My new query:

```
SELECT Tech, Date, Site, Routine
FROM view_routines WHERE Market_ID = {$SESSION:market}.
```

It works like a charm!

Hello,

Currently the extension doesn't support ability to use request variables in SQL query when server side pagination is enabled. Session variable can be used in standard version of the extension. The latest version of the module supports session variables.
