
Adding CSS Class to individual Columns

Posted by WhatsMyTime - 2015/05/19 14:44

Have a question on how to add CSS Class to Individual Columns on our website.

We want to highlight several different columns but no idea how to do it.

We need the columns to be Bold font.

Example

Columns Place , Name and Finishing Time in BOLD

Sample page

Many Thanks

Hello,

For example set "Columns settings -> ID" parameter to Place value, set "Columns settings -> CSS Class" parameter to col-bold value and add the following code to "CSS Styles" parameter:

TABLE TR TD.col-bold {font-weight:bold;}

Regards,
