
Format HTML link

Posted by shelvin_g - 2015/05/20 16:45

Hi,

Please can you help with my query. I have html links as one on the fields and ARI creates links for them correctly. Is it possible to create a Text hyperlink / html button instead of displaying the full URL ? The issue is that some html links are very long and causing formatting issues.

Thanks in advance.

Hello,

Enter the column name in "Columns settings -> ID" parameter and populate "Columns settings -> Format" parameter with the following value:

Link

Regards,
ARI Soft
