Possibility to use a filter only if not empty?

Posted by HeinzP - 2015/06/08 08:59
_____

I'm going to find a solution to show an ARI Data Table based on a SQL statement with a filter, a selection with a type (content of one field). Easy to do.

But I'd like to show all records of the table if the selection ends with an empty table!

Is there any solution to manage this inside the ARI Data Table parameters or is it necessary to do this 'outside'?

Thanks for any ideas!

Hello,

Could you specify what SQL query do yo use?

Hello

The solution is not yet implemented - it would be a table with the fields:

ID (key / index)
JobTitel (Text)
Kategorie (Auswahl)
Region (Text)
Anstellungsart (Text)
Pensum (Text)
Start (Text)
Aufgaben (Langtext)
Anforderungen (Langtext)
Angebot (Langtext)
Kontakt (aktuell frei)

and it should be a select on the field "Kategorie" (category). If there is at least one record of the selected category (example: architecture) then all records with this category should be the content of the ARI data table. If there is no record with the selected category then all records of the table should be in the displayed ARI data table.

And therefore the question:
Would it be possible to set a filter on the selected category and configurate to show all records if the query ends "empty"?

Regards
Heinz

_____

The extension doesn't support this ability.

Thanks for your answer - good to know it and ready to look for a workaround ;-)
