
Error (0) returned from SQL Query

Posted by keith_ajohnson - 2015/06/24 02:18

I recently moved my site from a shared server to a virtual server. After making the move, I updated the SQL server information for the tablet I'm trying to display, but the database isn't loading on the front end. You can view it here: dev.tubemethods.com/db. It returns the error: (mysql): SELECT * FROM specs;
Error (0):

I'm using the simple SELECT query to a table that has more than 9,000 entries. It's identical to the old server, but I get this error. Any ideas or places to start. MySQL configuration issue on my server?

The user has all privileges assigned to the database.

Thanks!
Keith

Hello,

"Error (0)" means no error occurs and it is shown because "SQL -> Debug" parameter is set "Yes" in module settings. Probably the table is empty fate a migration to a new server. Try to execute the following query:

```
SELECT COUNT(*) FROM specs
```

and the following one:

```
SHOW COLUMNS FROM specs
```

Thanks for the response.

I see what you mean about the error. If I turn off the jQuery loader, the raw data appears, but it's totally unformatted.

If I inspect the page on Chrome, I see a series of Console errors:
Uncaught SyntaxError: Unexpected end of input
db:236 Uncaught ReferenceError: BTLJ is not defined
db:36 Uncaught TypeError: \$(...).addClass(...).dataTable is not a function
db:38 Uncaught ReferenceError: JCaption is not defined

This is the only page on the site that's returning any errors, so I'm thinking there may be an issue with the plugin. I'm also having issues (only when on this page) using any other javascript elements, such as the red warning box "x" that is directly above where the table should display and the "lock" icon in the top right corner.

This seems to be related to why the loader never changes to reveal the data, and when I don't use the loader, the data displays, but not in any sort of format similar to the Ari Data Tables view.

The link again is dev.tubemethods.com/db. I was using Google Chrome and the built in inspector.

Thanks!
Keith

It seems this is a problem with plugin which is used to optimise javascript files loading. Try to disable it (jchoptimize plugin).
