scrolling / making the table responsive

Posted by ataylor14 - 2015/07/16 14:24

_____

Hello

Tha AriData table does not seem to be responsive in the sense that content is lost when I minimize the window, i.e., content to teh right cannot be seen.

How can I make use of the horizontal scrolling? Or are there any other settings that I need to set so that the table is responsive fully?

Many thanks

Amelia

_____

Hello,

The extension doesn't support ability to add horizontal scrolling dynamically (it can be defined for a fixed width in module settings, see "Choose table type -> ARI Data Table -> Scroll width" parameter).

Datatable application form "ARI Smart Content" extension is a responsive. We will do "ARI Data Table" widget is fully responsive in a future version of "ARI Data Tables".

Regards,

ARI Soft

Thank you for your reply.

I understand - Had I known about this I would have purchased Smart content rather than Data Tables.

When is the new version of Ari Data tables with full responsiveness coming out?

Many thanks

Amelia
