
dont save SQL Query - joomla 3.4.3

Posted by danilofm - 2015/07/20 07:00

Hi.

When I modify a SQL Query that was already saved, only the columns settings, description, name, etc are saved.

SQL Query are not saved, returns without any text.

The error started after upgrading to joomla 3.4.3 version.

I'm on localhost (intranet) and the other Joomla (3.4.1) works normally.

This is a known solution error?

I have the same problem with joomla 3.4.4. Is there a solution or a workaround available by now? I realize that I could edit the params field of the corresponding module record in the components table of the joomla database, but that is a tedious approach.

Hello,

Do you use the latest version of the extension? Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Thank you for your reaction. No, I am probably on an older version which I inherited from my previous Joomla installation.

I shall try to update the ARI Data Tables plugin first and report later on this.

For now I reverted to Joomla 3.4.1 where I do not have these problems

Use "ARI Data Tables" v. 1.15.2. It is compatible with Joomla! 3.4.4.
